

Dataforensics PQC – SaaS Pricing

The following is a description of the pricing and services typically involved in the PQC SaaS (Software as a Service) type deployment.

- Dataforensics will initially setup two reports within the PQC system to mimic the format of the Density and Concrete Test reports that your company utilizes today. Other reports already within the system will be available as well at no cost. The cost to configure the reports is estimated to be \$1000, but could vary based on the exact requirements of your companies Density and Concrete Test reports.
- Dataforensics will host the PQC system on a web-server and provide access to as many personnel or clients as necessary.
- Training for the system is optional and there are two alternatives for training:
 - Online training is available and is ideal for training small groups of users or for a train the trainer session. The cost for a 2 hour online training session is \$300.
 - Onsite training is available and is ideal for training large groups of users. On-site training sessions in your office costs \$2,250 per day plus travel expenses billed at cost.
- Your company will be billed at the beginning of each month for all tests performed using PQC from the previous month. The unit price for each item are as follows:

<u>Item</u>	<u>Unit Price</u>
Density Test	\$ 0.25
Concrete Specimen	\$ 0.25
Daily Reports/Checklists	\$ 0.95

A density test is defined as a density test input in the system as either sand cone, nuclear, drive cylinder or balloon method

A concrete specimen is defined as the specimen that may or may not be tested in the laboratory for strength as part of the concrete set

A daily report/checklist is defined as a document loaded into the daily report/checklist module
